DataCore™ SOFTWARE

The Storage Hypervisor Company

SANsymphony™-V Disk Migration Suite

Simplifying Disk Migrations

Solution Benefits

The SANsymphony-V Storage Migration Suite delivers non-stop business operations – keeping critical users and applications running undisturbed during maintenance, migration or whatever data storage upheaval is occurring behind-the-scenes.

The SANsymphony™-V Storage Migration Suite significantly reduces the hours, effort and downtime required to migrate disk contents between storage systems.

SANsymphony-V contains a rich set of tools and capabilities to help simplify the job of data center relocations, VM moves, storage and disk array migrations.

From an end customer perspective, the software significantly minimizes the time and cost impacts associated with storage-related disruption and downtime. The SANsymphony-V Storage Migration Suite delivers non-stop business operations – keeping critical users and applications running undisturbed during maintenance, migration or whatever data storage upheaval is occurring behind-the-scenes.

Simplify and Fast-track Data Center Relocations, VM Moves and Storage Migrations

The SANsymphony-V Storage Migration Suite is most often used during a data center relocation or hardware refresh to help replace older storage arrays with newer devices. The Suite generally runs on separate servers inserted between the hosts and the storage systems. The software provides the hosts with pass through access to the original disks while it copies their contents in the background to the new storage equipment. After the two devices are fully synchronized, the tool may be removed. The original storage device may be decommissioned and the new storage device can be connected directly to the hosts to take its place.

Available from DataCore's Worldwide Network of Trained and Authorized Partners

The SANsymphony™-V Disk Migration Suite is now generally available from DataCore authorized partners located around the world. Please contact your local DataCore representative to locate a partner or for additional details and information.

SANsymphony™-V Storage Migration Suite - Migration Services Provider Information:

The SANsymphony-V Storage Migration Suite is available to authorized and trained DataCore solution providers. The suite combines a 30-day license to SANsymphony-V software and access to DataCore's support center for an authorized provider to perform a specific customer migration project during the licensed period. The migration suite enables partners to deliver cost-efficient and time-saving migration services through their staff of DataCore trained and certified professionals. Rather than having to purchase the SANsymphony-V software outright – migration services providers can cost-effectively acquire limited time access to the software licenses and support in order to better align and meet the needs of a specific customer migration project.

DataCore partners benefit by being able to fast-track difficult customer migration and data center relocation projects by maximizing the productivity, and time value of deploying needed critical professional services personnel to get these projects completed. Bottom-line, the SANsymphony-V Storage Migration Suite makes it easier for partners to take full advantage of the growing migration services opportunity.

SANsymphony-V Storage Migration Suite

The SANsymphony-V Storage Migration Suite combines 2 licenses of SANsymphony-V and partner access to technical call support during the 30 day migration period. The most common software options and features are provided as part of the suite. The Suite includes support for: iSCSI and Fibre Channel, metro-wide synchronous mirroring, asynchronous replication, advanced site recovery, auto-tiering, thin provisioning, disk pool tools, snapshot, CDP, I/O activity Heat Map and SANsymphony-V storage management.

Below is the model number (SKU), description and ordering information:

Product	Description
SMP-MGV-100-EVS	SANsymphony-V Storage Migration Suite

The package includes 2 licenses of SANsymphony-V, support for up to 16TB of managed capacity and access to DataCore's technical call center for support during the 30 day migration period. A DataCore Certified Installation Engineer (DCIE) is required to provide migration services. The Migration Suite may be repurchased and extended for an additional 30 days at a time should the planned migration require more time.
