

Exclusive Program for Cloud Service Providers

Care for your customers' data with confidence
while keeping storage TCO under control

BENEFITS

- **Affordable pricing** with exclusive and flexible service provider licensing
- **Pay only for what you use:** Based on monthly metering
- **Unlimited scalability** to start small and grow without constraints
- **Offer SLAs that matter to your business** and expand with additional services

Many organizations are shifting towards consuming IT as-a-service (XaaS), e.g., SaaS, PaaS, IaaS, BaaS, DRaaS, etc. Selecting an appropriate IT infrastructure and reliably delivering these services while meeting various SLAs is mission critical for cloud service providers. An essential component of that IT infrastructure is the storage layer which houses and protects your customers' most valuable asset – their data.

As a cloud service provider, you need to ensure your storage infrastructure meets two key requirements:

1 Best Technology

- Smart and efficient resource utilization
- Uniform and scalable data services

2 Efficient Procurement

- Low costs
- Transparent billing based on actual usage

Provide value-added services to your customers by partnering with **DataCore** and leveraging the technology of **Software-Defined Storage (SDS)** as part of your hosted services. You can derive maximum value from your current and future storage investments and adapt your infrastructure to meet changing customer demands. Numerous cloud

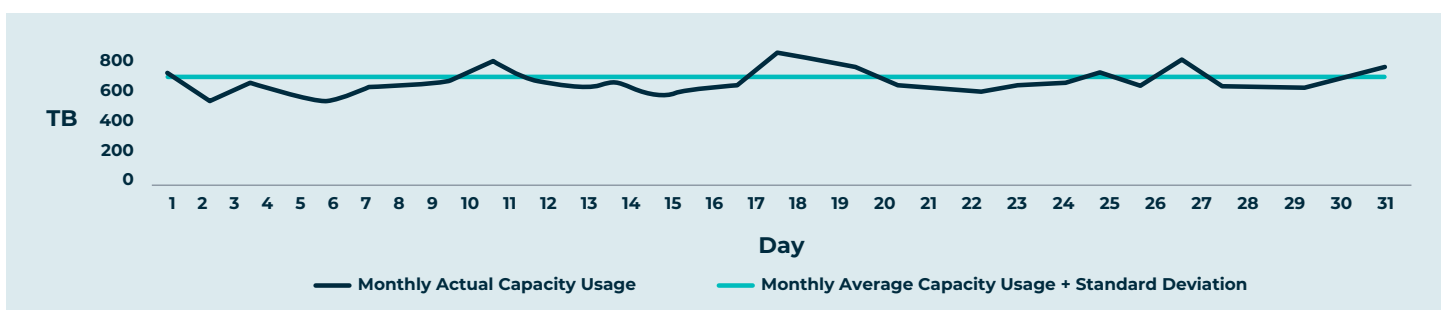

service providers use DataCore SDS solutions to improve data portability and meet BC/DR service levels, strengthen data protection, and control growing storage costs. Become a DataCore-powered cloud service provider and join our esteemed network of CSP partners.

Join the DataCore Cloud Service Provider (CSP) Program

You can achieve greater margins from your current and future IT infrastructure by joining the DataCore CSP Program. Leverage DataCore SDS solutions for **block storage (SANsymphony)** and **object storage (Swarm)** to provide your IT services. You can integrate these SDS solutions as part of your cloud services across on-premises, hosted private clouds, and co-location facilities.

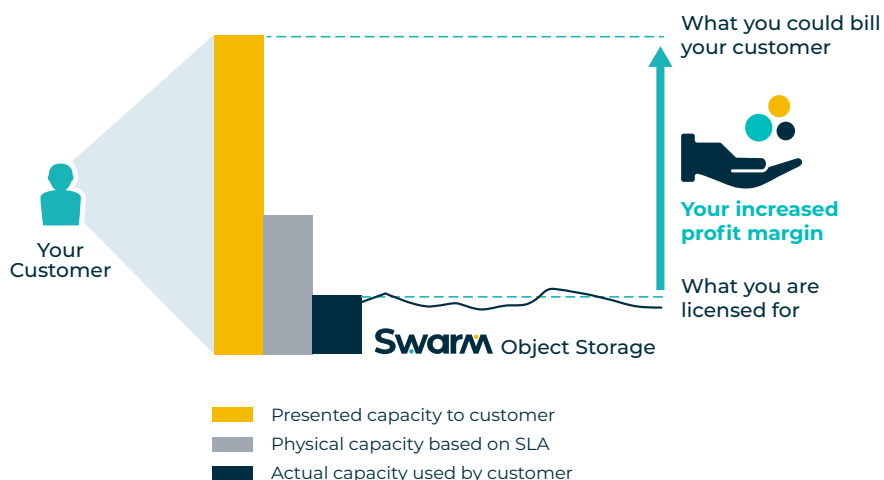

Exclusively for cloud service providers, the CSP program offers a metered consumption-based licensing model that tracks actual capacity usage (TBs) per month. The fair billing formula smoothes out peaks using the standard deviation of consumption over the month. Should there be times when your customers' storage consumption decreases, your license fees, which include 24x7 support, will reduce correspondingly.

Transparent metered licensing model based on average capacity usage plus standard deviation

DataCore's dedicated cloud service provider licensing model allows you to charge your customers for the capacity presented (typically higher than actual usage), while you get billed only for actual capacity occupied. This enables you to increase your profit margins.

Together with the unique SDS capabilities, this procurement model allows you to offer value-added high end data services to your customers, expand your SLAs, and grow both your revenues and profits.

Licensing methodology illustrated using Swarm object storage as an example
